Uncontrolled air leakage can be a significant contributor to increased heating and cooling costs. Dow Corning® DefendAir 200 helps reduce energy consumption, providing fast, easy and effective protection from air infiltration and water penetration.

Dow Corning® DefendAir 200 is a 100% silicone liquid-applied air and water barrier. Long-term UV resistance means no performance issues from extended sun exposure – whether due to unanticipated construction delays prior to cladding installation or to normal exposure in rainscreen applications.

The vapor-permeable, one-component, water-based coating dries to form a flexible membrane that is impervious to water but has the ability to “breathe,” allowing water vapor to escape from inside the substrate.

Dow Corning® DefendAir 200 is a key component of a building weather protection system to prevent air and water infiltration.
